A Greenhouse inoculation experiment
Plant material
4 Acuce lines
15 / 49 / 69 / 87
16 focal-neighbour combinations
Pure or Mix
2-3 batches; 4-6 pots per combination
64 blast / 96 brown spot
Inoculation
M. oryzae CH1189
B. oryzae CH9015
B Outdoor full-life-cycle experiment and field survey
Seedlings
one plant per pot
Outdoor PHIM
2 plants per pot
10 replicate pots
Weekly height
15 surveys
Yield at 153 d
Three sampling stages
Tillering / flowering
Grain filling
RNA extraction and Fluidigm
92 target genes, 20 pathways
80 / 86 / 88 samples
Field survey in the Yuanyang terraces
3 years x 3 fields x 6 accessions
Blast, brown spot, smut, height, grain weight
